多线程代码

任务1:用部署好的openeuler环境,在命令行下编辑并编

译

1.编写多线程示例代码(以五个线程为例)

mkdir -p src/pthread_example
vim src/pthread_example/thread_demo.c

代码内容:

```
#include <stdio.h>
#include <stdlib.h>
#include <pthread.h>
#include <unistd.h>
#define NUM_THREADS 5 // 线程数量
/* 线程工作函数 */
void *thread_worker(void *arg) {
    int thread_id = *((int *)arg);
    printf("Thread %d: start (PID: %d)\n", thread_id, getpid());
   // 模拟工作(随机延时0-3秒)
    sleep(rand() % 4);
    printf("Thread %d: complete\n", thread_id);
    return NULL;
}
int main() {
    pthread_t threads[NUM_THREADS];
    int thread_args[NUM_THREADS]; // 每个线程的参数
    srand(time(NULL)); // 初始化随机数种子
   printf("Main Thread[PID: %d] is creating %d Sub Threads...\n", getpid(), NUM_THREADS);
   /* 创建多个线程 */
    for (int i = 0; i < NUM_THREADS; i++) {</pre>
       thread_args[i] = i + 1; // 线程编号从1开始
       int ret = pthread_create(&threads[i], NULL,
                              thread_worker, &thread_args[i]);
       if (ret != 0) {
           perror("Threads Creation Failed!");
           exit(EXIT_FAILURE);
       }
   }
   /* 等待所有线程完成 */
    for (int i = 0; i < NUM_THREADS; i++) {</pre>
       pthread_join(threads[i], NULL);
   }
```

```
printf("All Threads Completed! \n");
return EXIT_SUCCESS;
}
```

代码截图:

2. 编译运行多线程程序

gcc src/pthread_example/thread_demo.c -o src/pthread_example/thread_demo -lpthread
./src/pthread_example/thread_demo

3. 运行结果截图

任务2:用git创建并初始化自己的os实践项目,将每次HW 实践和未来的上机都在项目目录下建立单独的子目录,并 利用git工具管理好每一次的修改

1. 创建项目目录结构

```
mkdir -p os-practice/{HW1,HW2,HW3} # 创建项目目录及子目录 cd os-practice
```

2. 初始化Git仓库

```
git init
git add README.md
git commit -m "第一次提交"
git branch -M main
git remote add origin https://github.com/18940610611/os.git
git push -u origin main
```

注:本人直接在github手动添加文件后在git bash上关联文件 附截图如下:

```
enovo@ZHR MINGW64 /C/Users/Lenovo/os-practice (master)
git remote add origin https://github.com/18940610611/os.git
enovo@ZHR MINGW64 /C/Users/Lenovo/os-practice (master)
git remote -v
origin https://github.com/18940610611/os.git (fetch)
origin https://github.com/18940610611/os.git (push)
```

3.仓库网址:https://github.com/18940610611/os

问题

如何用补丁的方式提交作业,还需要时间去研究
